

WHAT LABS CAN I TRY?

Choose from the list of following available vLabs and register to get some hands on time with one or more of these exciting products:

ATMOS – Create automated turn-key Storage as a Service (SaaS) solutions.

Avamar – Backup with flexible restore options – individual files or full VMs

Isilon - Create multi-Petabyte filesystems that store millions of files.

RSA Archer: Governance, Risk, and Compliance (eGRC) solutions set up to protect a VMware environment.

UIM 2.1 - Experience the capabilities and the ease of use of UIM as the provisioning tool for VCE Vblock infrastructure packages.

VAAI - Provision your own VAAI-enabled storage and see the benefits it brings to tasks such as cloning VMs.

VMAX - Practice using the latest features of Engenuity 5875 on live Symmetrix equipment.

VNX - Learn the new VNX Unisphere management interface and see how easy it is to provision NFS storage for VMware.

VNXe - The EMC VNXe series redefines networked storage for the small business to small enterprise user, delivering an unequaled combination of features, simplicity, and efficiency. This lab focuses on the VNXe Unisphere Interface and management of the VNXe product.

VPLEX - Use the VPLEX Management Console to create Distributed Devices and then configure ESX server access to them.

Virtual Storage Integrator (VSI) Plugin for VMware vCenter - Provision new storage, save valuable disk space by compressing a VM or data store, gain a detailed view on the underlying physical storage or spin up extra VMs.
